As a member of the Quality Team at Inmold Group, I play an operational role in overseeing and managing a range of quality and environmental management systems at a company-wide level.

My responsibilities include:

- Responsible for overseeing company-wide quality control.
- Engaged in operational management of the integrated quality and environmental system, encompassing the application, implementation, and sustainability of requirements.
- Actively involved in the operational application of IATF 16949 standards in polymer product injection production.
- A vital part of the operational team for the implementation of ISO 27001, ISO 45001, and ISO 50001.
- Lead the operational implementation and utilization of quality tools across various sectors.
- Contribute as a member of Inmold Group's Green Agenda Team.
- Conduct internal and external audits, actively collaborating in supplier development.
- Play a key role as part of the project team in the development of new projects.

In my role as a member of the Quality Team at Inmold Group, I actively supervise and manage an array of company-wide quality and environmental management systems, ensuring their seamless integration and compliance while contributing to supplier development and the successful launch of new projects.
